CERS Adapter Release Notes Version 08/05/2014

- [Synchronizing Enforcement Violation Records](#)

Synchronizing Enforcement Violation Records

The CERS adapter bases on the following rules to generate InspectionRegulatorKey when synchronizing enforcement violation data from Accela Automation to CERS.

InspectionRegulatorKey = Record ID (Facility Record ID) + '-' + Inspection Sequence ID + '-' + Program Element.

Note: Program Element is based on Inspection Violation logic from inspection guide sheet data to be generated.
