CERS Adapter Release Notes Version 07/07/2014
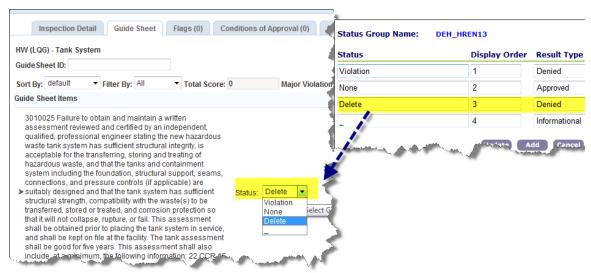

- Delete Inspection Violation Records
- Create and/or Delete Enforcement Violation Records

Delete Inspection Violation Records

When synchronizing inspection violation data from Accela Automation to CERS, the adapter enables CERS to delete the inspection violation records if the statuses of these violation records in Accela Automation are "Delete".

Precondition:

The status "Delete" exists in the Status dropdown list in Accela Automation. The screenshot below shows you how to add the status.

Create and/or Delete Enforcement Violation Records

When synchronizing enforcement violation data from Accela Automation to CERS, if the statuses of these violation records in Accela Automation are "a Delete", the adapter enables CERS to delete the enforcement violation records; if the enforcement violation records do not exist in CERS and their statuses are not "Delete", the adapter enables CERS to create the enforcement violation records.

Precondition:

The enforcement records in Accela Automation contain the "CERS CME Transaction" field in ASI table "VIOLATIONS", which is a drop-down list with the "a Delete" item.
